We need the 60 meter band to communicate traffic to USA and abroad stations in emergency cases as well as priority traffic of all kinds. Conditions on 60 meters may be a lot different than 80 or 40 meters, having another band could mean my signal can get thorough. The use of digital modes made communication more reliable and traffic can get exchanged. I feel a Canadian channel would help with more direct communications within Canada as emergencies at home may occur. Thank you Lyle Maystruck VE5KKS
